Dribbble

dribbble.com/animify

01 Key Skills

- Javascript ES6+
- Typescript
- React
- Redux
- Electron
- SCSS
- Jest
- Enzyme
- NPM
- Git
- Figma
- Sketch
- Copywriting
- Mentoring new team engineers

02 Professional Experience

Overflow (by Proto.io)

Software Engineer

June 2017-Present

Nicosia, Cyprus

- Engineered the first beta Overflow macOS app alongside a small scale team, initially using D3, Vue.js, and vanilla Javascript, and mentored new engineers as the team began to expand
- Established and currently spearheading the production of the first unified design system for the Overflow product ecosystem (macOS, web, and mobile platforms), consisting of accessible React components accompanied by documentation on design guidelines and principles
- Led and took ownership of the new Overflow Dashboard, built on React with CI/CD to deploy to AWS S3, by collaborating closely with our design and API team to meet narrow business goals
- Promoted the launch of Overflow whilst attending Adobe Max in 2018 and assisted in organizing co-hosted meetups with Figma and Sketch

Proto.io

Web Developer Intern

August 2016

Nicosia, Cyprus

- Engaged in technical research to build a rudimentary concept for a new product idea, of which then became Overflow, using vanilla Javascript and native canvas
- Developed custom easings, Spring transitions and visual graphs for the existing transition family within Proto.io, which later shipped to thousands of customers that year

02

Ebuyer.com

Junior Web Designer

June 2015-May 2016

Howden, United Kingdom

- Designed and developed landing pages, following brand design guidelines, to elevate products and offers for major brands such as Microsoft, Corsair, and Logitech
- Coordinated with Product Managers to create and launch large scale targeted marketing campaigns to millions of customers across the United Kingdom

03 Notable Projects

The Colorbook

December 2017-December 2018

42,000+ Unique Visitors 185,000+ Page Views

The Colorbook was an open-source web platform that pulled the most popular shots from Dribbble daily, extracted the most used and prominent colors and displayed a palette per post showing color trends over periods of time. Launched on Product Hunt in 2017 with over 450 upvotes, the platform was rapidly being visited by the design community ranging across 150+ countries.

Blossom UI

July 2016-Present

12,000+ NPM Downloads 70+ Design Components

Blossom is an extremely light, performant and open-source design framework that was initially built for myself, to easily create websites with a cohesive style. By documenting all components and exposing the platform, the project grew naturally, gaining a fair amount of downloads over the years.

04 Education

University of Hull

BSc Computer Science with a Year in Industry (Upper Second Class)

2013-2017

Hull, United Kingdom

The Senior School

AS / A2 Level (Maths, Computing, Physics, Biology)

2007-2013

Nicosia, Cyprus

05 Interests

- **Creative coding** - most nights you'll find me having spent countless hours tweaking an animation until it just feels right. Either that, or playing with combinations of typography and colors to create some quirky branding for my next side project.
- **Gaming** - I likely would have wound up in a completely different field if I hadn't got involved with video games at a young age. The complexity behind rapidly evolving game graphics and interfaces is an area that constantly excites me and always gets me thinking.
- **Travelling** - I've lived in Asia for over 10 years when I was young and still continue my desire of experiencing amazing cultures to this day; meeting new people from across the world is truly inspiring. The next country I'd like to visit the most is Cuba!
